Introduction

We are pleased to present the second issue of our third volume of Élan ZaaK's *Industry Multiples in LATAM Analysis*. The report was prepared by Élan ZaaK Capital Division, the experts conformed this team are professionals in Finance, Master's in Business & Intangible Valuation, Certified M&A Advisors, Master's In Business Administration and Master's in Finance. This report provides a detailed analysis of trading multiples for key industries in Latin America (LATAM) as of the second quarter of 2026, drawing on data from publicly traded companies across the region and categorized by the Global Industry Classification Standard (GICS).

In addition to the multiple analysis, we incorporate data on recent M&A activity, private placements, buybacks, and public offerings across Latin America over the last six months, providing context on transaction volumes, and capital allocation trends. According to BBVA Research's Mexico Economic Outlook (June 2026), Mexico's economy is expected to grow 1.2% in 2026, reflecting weak domestic demand, slower investment activity, and continued uncertainty. Despite these challenges, medium-term opportunities linked to nearshoring, advanced manufacturing, and technology-related investments remain supportive of long-term growth prospects.

Inflation is expected to moderate gradually, with headline and core inflation projected to end 2026 at 4.1% and 3.9%, respectively. In response, Banxico is expected to maintain its policy rate at 6.50%, supporting macroeconomic stability while monitoring inflationary and external risks.

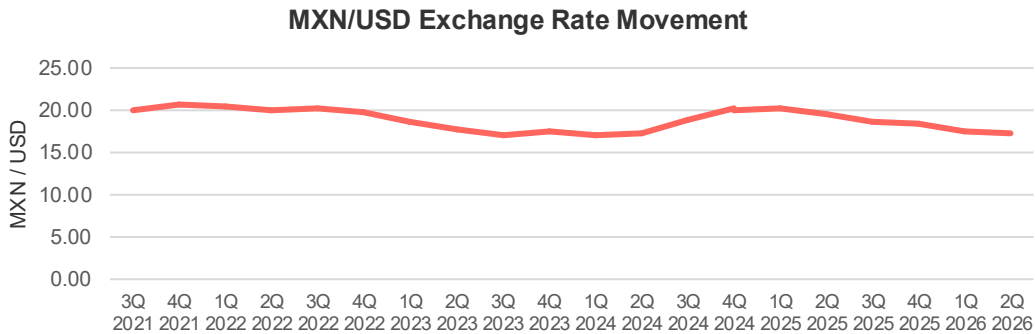

From a fiscal and financial perspective, debt levels are expected to increase moderately, while the Mexican peso is projected to remain relatively stable, ending 2026 at approximately 17.8 pesos per U.S. dollar. Overall, the outlook points to a low-growth but stable economic environment, supported by moderating inflation, a predictable monetary policy framework, and resilient macroeconomic fundamentals.

The 2Q 2026 multiples report provides an in-depth analysis of key valuation metrics for LATAM industries. For non-financial sectors, the report covers TEV/Revenue, TEV/EBITDA, TEV/EBIT, P/Norm EPS, and P/Tang BV multiples. For the financial sector, the focus is on P/Norm EPS and P/Tang BV multiples. These values reflect the unique trends and dynamics of each sector in the region.

We hope this edition serves as a valuable resource in understanding trading multiples across core industries in LATAM and Mexico. For further information or an in-depth discussion of the findings, please feel free to contact us.

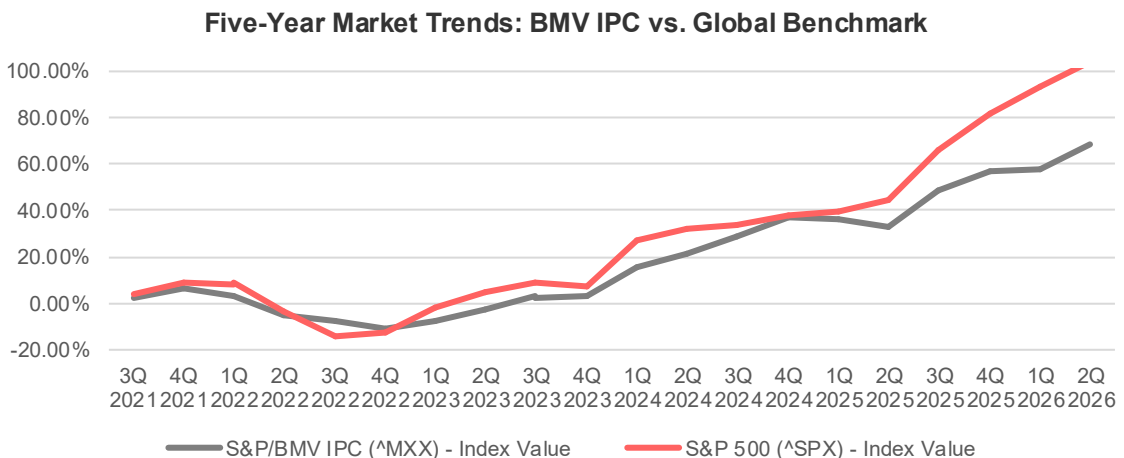

Mexico's Market Trends and Economic Outlook

Source: Prepared by Élan ZaaK with information from Banco de México.

The chart illustrates the evolution of the Mexican peso against the U.S. dollar from 3Q 2021 to 2Q 2026. After trading near 20.00 MXN/USD during 2021 and 2022, the peso appreciated significantly throughout 2023, reaching a cycle low of 17.00 MXN/USD in 1Q 2024. The currency subsequently weakened during the second half of 2024 and early 2025, surpassing 20.00 MXN/USD, before recovering steadily over the following quarters. By 2Q 2026, the exchange rate had strengthened to 17.42 MXN/USD, reflecting an overall appreciation of the peso compared to the beginning of the period and highlighting its resilience amid changing market conditions.

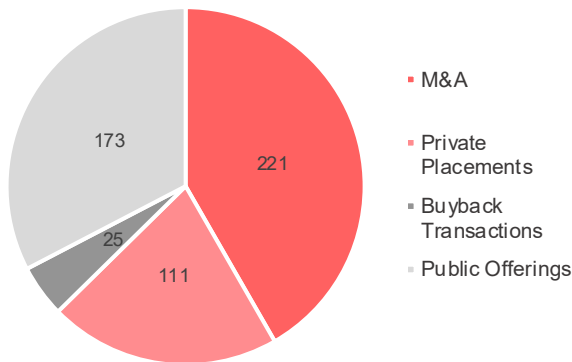

Source: Prepared by Élan ZaaK with information from S&P Capital IQ.

The chart compares the performance of Mexico's S&P/BMV IPC and the U.S. S&P 500 from 3Q 2021 to 2Q 2026. Both indices experienced a period of weaker performance during 2022, followed by a sustained recovery beginning in 2023. While the S&P 500 initially outperformed during the early stages of the recovery, the IPC gained significant momentum throughout 2024 and 2025, generating stronger cumulative returns.

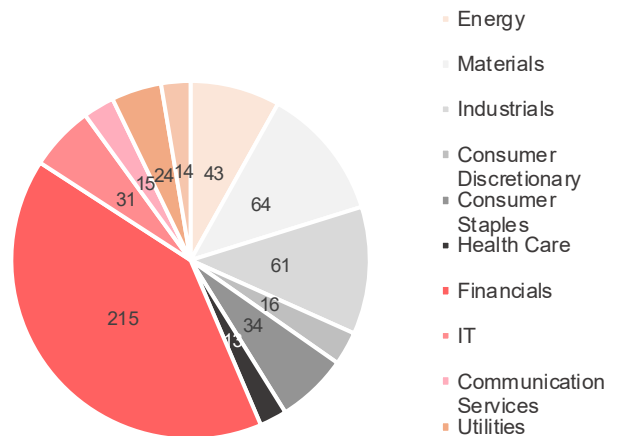

By 2Q 2026, the IPC had delivered a cumulative return of 68.31%, compared to 35.80% for the S&P 500. The widening performance gap highlights the stronger appreciation of Mexican equities over the period, reflecting favorable domestic market conditions and continued investor confidence despite periods of global market volatility.

LATAM Median Multiples 2Q 2026

This chart presents the median multiples for the 11 GICS sectors in Latin America for 2Q 2026. The multiples displayed include TEV/Tot Rev, TEV/EBITDA, TEV/EBIT, P/Norm EPS, and P/TangBV (for non-financial sectors¹), providing a broad view of the valuation metrics across sectors. Each sector's median values give an overview of market valuations in relation to key financial metrics, allowing for quick comparisons among industries. Detailed insights into each industry will be available in the following pages, offering a more in-depth analysis of sector-specific multiples.

Criteria

- Data was sourced from Capital IQ collected on July 1st, 2026.
- In the industry multiples report, Elan ZaaK is providing information on the number of recent deals (transactions) in Latin America over the last semester, covering M&A, private placements, buybacks, and public offerings.
- **Transaction Definitions:**
 - M&A Transaction: The consolidation of companies through mergers or acquisitions to expand or gain advantages through synergies.
 - Private Placement Transaction: Direct sale of securities to select investors, bypassing public markets.
 - Buyback Transaction: A company repurchases its own shares to reduce outstanding stock and boost share value.
 - Public Offering: Selling shares to the public to raise capital, commonly through IPOs or additional offerings.
- For all multiples presented, we included publicly traded Latin American companies as of the report's reference date, with data obtained from Capital IQ. Companies were grouped by sectors following the GICS to ensure each category had sufficient components and detail to support the analysis objectives.
- For this analysis, we selected the top 10 companies by market capitalization within each sector (Large, Mid, Small, and Micro Cap), resulting in an average sample of 40 companies for each sector analysis.
- **Multiples Definitions:**
 - TEV (Total Enterprise Value) is calculated as the market value of equity plus the book value of debt, minority interests, and preferred stock, minus cash, equivalents, receivables, and both short- and long-term investments.
 - Revenues are calculated over the latest 12 months.
 - EBITDA refers to earnings before interest, taxes, depreciation, and amortization over the past 12 months (provided by Capital IQ, adjusted for one-time items).
 - EBIT refers to earnings before interest and taxes, represents a company's operating income over the past 12 months, calculated as revenues minus operating expenses (excluding interest and tax expenses) as reported by Capital IQ.
 - P/Norm EPS is the share price divided by diluted earnings per share.
 - P/TangBV is the share price/book value minus intangible assets, per share on a diluted basis.
- Multiples were calculated in the reporting currency of each company.

Market Cap Sizes

Market capitalization, or "market cap", measures the total value of a company's outstanding shares and is often used to categorize companies by size. Here's a breakdown of the main market cap categories seen in this volume:

1. Large Cap: Large-cap companies typically have a market cap of \$10 billion or more. These are well-established companies that are often leaders in their industries, such as Apple, Microsoft, and Coca-Cola. Large-cap stocks tend to offer stability and lower volatility, making them suitable for conservative investors, though they may experience slower growth compared to smaller companies.

2. Mid Cap: Mid-cap companies usually have a market cap between \$2 billion and \$10 billion. These companies are generally established businesses in growing industries, with more growth potential than large-cap companies but higher risk. Mid-cap stocks can offer a balance between stability and growth, making them appealing for investors seeking moderate risk and return.

3. Small Cap: Small-cap companies have a market cap between \$250 million and \$2 billion. These are often newer companies or firms in niche sectors, with significant growth potential. Small-cap stocks can be more volatile and are riskier investments, but they also offer the possibility of higher returns to investors willing to take on more risk.

4. Micro Cap: Micro-cap companies have a market cap of less than \$250 million. These are typically small, young companies or businesses in emerging industries. Micro-cap stocks are highly speculative and can be very volatile. They may offer substantial growth potential, but they also carry high risk due to limited financial resources and less-established business models.

Industry Definitions

The Global Industry Classification Standard (GICS) divides the economy into 11 sectors, each representing a key area of economic activity. Here's a description of each:

1. Energy: Companies involved in the exploration, production, and sale of oil, gas, and coal. This sector also includes businesses that provide energy equipment and services.

2. Materials: This sector covers companies that produce chemicals, construction materials, glass, paper, forest products, and related packaging products. It also includes metals, mining, and steel companies.

3. Industrials: Companies that produce machinery, equipment, and supplies used in manufacturing and construction are part of this sector. It also includes aerospace, defense, transportation, and services such as waste management and logistics.

4. Consumer Discretionary: Companies in this sector provide goods and services considered non-essential, like automobiles, consumer durables, leisure products, and retail services. It also includes media, hotels, restaurants, and luxury goods.

5. Consumer Staples: This sector includes companies that produce essential goods, such as food, beverages, and household products. It also covers producers of personal care items, tobacco, and other consumables that people typically purchase regularly.

6. Health Care: Encompasses companies that provide medical services, manufacture medical equipment and drugs, and conduct research and development of biotechnology. It also includes health care providers and services.

7. Financials: Comprises firms engaged in activities such as banking, investment, insurance, real estate, and capital markets. It includes companies that provide financial services to individuals and businesses.

8. Information Technology: This sector includes companies that produce software, technology hardware, semiconductors, and IT services. It covers businesses involved in digital systems, data processing, and other information technology solutions.

9. Communication Services: Companies that provide communication and related services, including telecom, media, entertainment, and interactive media and services. This sector is essential for content and data transmission.

10. Utilities: Companies in this sector are involved in the production and delivery of utilities like electricity, water, and gas. It includes both public and private utility companies as well as renewable energy providers.

11. Real Estate: This sector includes real estate investment trusts (REITs) and real estate management and development firms. Companies in this sector own, develop, and manage various property types, from residential to commercial.
